Summary

Motivated Product Engineer trainee with a strong bias for action, passionate about building foundational systems at the intersection of Generative AI and Cybersecurity. Hands-on experience developing real-world full-stack applications and deploying secure AI/ML solutions from scratch. Ready to build, learn, and contribute to scalable enterprise products.

Education

Fr. Conceicao Rodrigues College of Engineering, Mumbai, BE in Electronics & Computer Science with **Honors in Cyber Security and Ethical Hacking**, **CGPA: 7.5** 2022 - 2026

Technical Skills

Languages: Python, JavaScript, TypeScript, Node.js, C/C++ , MySQL

Frameworks/Libraries: React, React Native, Express, Next.js, TensorFlow, PyTorch, OpenCV, Scikit-learn, NumPy

Tools/Platforms: REST APIs, Postman, Power BI, GCP, Leaflet.js, Antigravity, AI Agents

Databases: MongoDB, PostgreSQL, Firebase, Supabase, ChromaDB

Domains: Generative AI, Machine Learning, Data Analytics, Cybersecurity Basics, Full-Stack Web Development

Experience

Chartered Market Technician (CMT) Private Limited *AI & Data Sciences Intern* Jan 2026 - Present

- Prototyping, deploying, and refining Generative AI and traditional Machine Learning modalities for production-level enterprise applications.
- Developing pipelines for the effective extraction and processing of data from diverse document formats to be seamlessly consumed by LLMs.

Infosys Springboard *Computer Vision Intern* Sep 2025 - Nov 2025

- Contributed to the *Vision Extract Isolation* project remotely from Mumbai, applying data extraction and processing techniques in Data Science and Computer Vision.
- Collaborated with a Data Scientist mentor on real-world datasets and model development.

Projects

Enterprise GenAI System & Persona-Aware Bot GitHub Repository

- Built an enterprise-grade AI assistant using Python, leveraging a Retrieval-Augmented Generation (RAG) architecture and ChromaDB.
- Engineered a data interface to securely parse, extract, and format text from unstructured knowledge bases for ingestion by LLMs.
- Implemented semantic caching and a rigorous PII (Personally Identifiable Information) filter to detect and secure business-sensitive data before AI processing.
- Designed an intelligent persona engine to deliver context-aware, role-based interactions over real-time communication platforms.

MEDICO GitHub Repository

- Developed a cloud-based full-stack healthcare app for medical report management.
- Built responsive UI with React.js and Firebase Auth for secure access.
- Integrated Firebase for secure storage and efficient data management.

GlowUp AI – Personalized Habit Tracker GitHub Repository

- Developed a mobile habit tracker using React Native (Expo) and Supabase with PostgreSQL Realtime.
- Integrated a Generative AI to deliver personalised micro-habits and multi-step wellness plans.
- Implemented scalable streak tracking, points, and real-time social leaderboard.

PAWPARAZZI GitHub Repository

- Built a full-stack pet care platform with social media features to boost engagement.
- Developed using React.js, Node.js (Express), MongoDB; integrated Leaflet Maps for location-based services.
- Designed a multi-stream revenue model: service commissions, premium listings, vendor subscriptions.

Certifications

- Generative AI, AI, ML & Deep Learning (2024)
- Computer Vision Specialization (2023, 2024)
- Full Stack Web Development (2023, 2024)
- Data Science, Power BI, and Prompt Engineering (2024)
- Cybersecurity and Ethical Hacking by IDEMI
